SUMMARY

Computer Science student who turns operational data into decisions, with hands-on experience building analytics, BI dashboards, and decision-automation tools on large real-world datasets. Combines a data-analytics focus with full-stack and AI-assisted development to deliver end-to-end solutions. Seeking a data and technology internship supporting the digitalization of global supply chains through data-driven insight, automation, and measurable operational impact.

EDUCATION

Queen's University

Kingston, ON

B.S. in Computer Science

2023 – 2028

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Software Quality Assurance, System-Level Programming, Software Specifications, Discrete Structures

EXPERIENCE

AI & Data Analyst, Risk Asset Management

May 2026 – Present

CIBC

Toronto, ON

- Automated asset-remediation decisions at scale with rules-based algorithms, replacing manual review across an inventory of **40,000+ enterprise assets** and cutting review time by **50%**.
- Analyzed the risk profile of **40,000+ enterprise assets** to prioritize remediation and reduce security exposure.
- Delivered data-driven analysis and recommendations to stakeholders, informing enterprise asset-management decisions.

Data Analyst Intern

May 2025 – Aug 2025

Durham Region Transit

Whitby, ON

- Analyzed **20,000+ work orders** across a **200+ vehicle fleet** using SQL, Python (Pandas, NumPy), and Excel, resolving data-quality issues that improved reporting workflow efficiency by **50%**.
- Developed interactive Power BI dashboards giving stakeholders end-to-end visibility into fleet KPIs and cost per service hour, driving data-driven scheduling and asset-retirement decisions.

PROJECTS

Roamer – Location-Based Social App | *React Native, TypeScript, Mapbox, Supabase/PostGIS* June 2026 – Present

- Built a full-stack geo-social mobile app rendering friends' posts as GPS-pinned landmarks on a live Mapbox GL map, backed by Supabase PostgreSQL/PostGIS with GIST-indexed geography and row-level security enforcing location fuzzing (ST_SnapToGrid) and privacy controls at the database layer.

PolicyProof – AI Policy Compliance Platform | *React, TypeScript, Flask, AWS Bedrock, Python* Jan 2026

- Engineered an AI compliance-auditing platform using an Amazon Bedrock pipeline that checks policy PDFs against **15+ frameworks** (GDPR, HIPAA, SOC 2, ISO 27001).
- Generated page-level citations and remediation steps automatically, processing a **10-page** policy document in **under 5 seconds**.

Fleet Condition Index (FCI) | *Python, SQL, Power BI*

May 2025 – Aug 2025

- Designed a fleet-scoring model on **10 years** of work-order data (age, mileage, mechanical history), reaching **100% accuracy** in identifying the 15 best- and worst-performing buses.
- Delivered an Excel index and Power BI dashboard for maintenance-cost tracking, guiding long-term fleet-planning decisions.

Asset Fuzzy Matching | *Python, SQL, ServiceNow CMDB*

June 2026 – Present

- Built a fuzzy-matching system that assesses asset risk by detecting manufacturers and components with changed names, dates, or versions, applying string-similarity algorithms to flag records for audit across **25,000+ assets**.

LEADERSHIP

Project Manager

Sept 2025 – Present

Queen's Sports Analytics Organization (QSAO)

Kingston, ON

- Led a team of **5 analysts** producing performance insights from **10,000+ data points** per season, delivering dashboards tracking player KPIs, lineup efficiency, and team trends.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, C++, C, C#, Bash, HTML/CSS

Frameworks & Libraries: React.js, React Native, Node.js, Flask, Pandas, NumPy, Playwright, Pytest

Tools & Platforms: AWS (Bedrock), Docker, Git, PostgreSQL/PostGIS, Supabase, REST APIs, Linux, Power BI, Mapbox
